

Use Dashboard Nodes For Creating UI(Web App)

Date	14 November 2022
Team ID	PNT2022TMID23864
Project Name	Signs with smart connectivity for better road safety

The screenshot displays the Node-RED web interface in a browser. The top navigation bar shows the URL: `node-red-miku-2022-11-04.eu-gb.mybluemix.net/red/#flow/8c49b93d9a2db2a3`. A green banner at the top indicates "Successfully deployed". The left sidebar contains a "filter nodes" search bar and a list of available nodes including numeric, slider, text input, date picker, switch, colour picker, text, gauge, form, audio out, notification, ui control, chart, and template. The main workspace, titled "Flow 1", shows a flow starting with an "IBM IoT" node (labeled "connected"). This node branches into two parallel processing nodes: "Humidity" and "temperature". Each of these nodes has two outgoing connections: one to a corresponding gauge node (e.g., "humidity" and "temperature") and another to a "msg.payload" node. The right sidebar features a "debug" console showing a log of messages with timestamps and payloads, such as: `2022/11/04 10:39:21 AM node: 3fb1d3a16ac1b7df lol: 5`. The bottom of the image shows the Windows taskbar with various open applications and the system clock indicating 10:39 on 04-11-2022.
